

Keech

Keeblok™

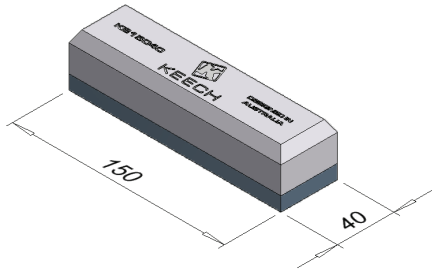

Protect high wearing areas and reduce maintenance time and cost with Keeblok™ by Keech. Keeblok™ “chocky bar and buttons” are designed to provide protection against abrasion. Keeblok™ is suitable for bucket and fixed plant such as chute liners. Keeblok™ can be formed and welded onto any flat or curved surface.

Keeblok™ is manufactured from 27 per cent chrome iron, metallurgically bonded to a mild steel backing plate. The chrome iron provides excellent abrasion protection for buckets and fixed plant, while the mild steel ensures the Keeblok™ can be easily welded. Keech Keeblok™ is available in six standard sizes. Custom sizes are available on enquiry.
